

**Worcester Polytechnic Institute**  
**Department of Electrical and Computer Engineering**  
**EE529 --- Analog Circuits and Intuitive Design Methods**  
**Spring, 2009**  
**COURSE GUIDELINES AND SYLLABUS**

---

Lecturer: Prof. Marc T. Thompson, AK316  
Email: [marctt@thompsonrd.com](mailto:marctt@thompsonrd.com), [marctt@aol.com](mailto:marctt@aol.com)  
Level: Graduate level  
Lecture: Thursday evenings, 6:00-8:50 on Worcester campus, AK233  
Course Secretary: (508) 831-5231  
Marc Thompson WPI website: <http://www.ece.wpi.edu/People/mtt.html>  
Marc Thompson business website: <http://www.thompsonrd.com>

---

### **Philosophy**

The application of some simple rules-of-thumb and design techniques is a possible first step to developing intuition into the behavior of complex electrical systems. This course outlines some ways of thinking about analog circuits and systems that hopefully will help to develop intuition.

The course is run as a graduate seminar, and discussion and debate is highly encouraged. The lectures are a mixture of instructional sessions covering new background material, and design case studies. Topics covered include: analog signal processing, transistor amplifier bandwidth analysis, switching transistor transient analysis, analog filter design, and feedback system design. Student assignments are a mixture of problem sets, and longer design problems.

### **Prerequisites**

Permission of instructor is required. Prerequisites are basic background in device physics, transistor amplifier and operational amplifier design. Control systems. Electromagnetism. Access to web searching and PSPICE simulation tools. It is assumed that the student also has the prerequisite background in Laplace domain analysis, Bode plots, pole-zero analysis, and the like.

### **Course load**

#### **Lectures**

Attendance in lecture and class participation is required. It is expected that the lecture will be very interactive with a lively "give-and-take." The classes will be a mixture of standard lecture format and Socratic question and answer sections.

#### **Reading assignments**

Reading will be a mixture of the course textbook chapters, Powerpoint slide presentations, technical papers and manufacturers' application notes.

#### **Problem sets**

Homework assignments will be given and due the following week. Material covered will be derived from lecture topics and reading assignments. Some homework assignments may contain a lab or simulation (SPICE or MATLAB component). **Late problem sets will not be accepted.**

#### **Exams**

There will be 2 exams.

#### **Design problems**

Several design problems will be given. The design problem assignments will be narrower in scope than the homework assignments and will require significant design effort, simulations and/or lab work, and a written report. More information will be given later on in the term. **Late design problems will not be accepted.**

10/24/08

### **Grading**

Grading will be done with the *approximate* percentage distribution:

- Homework: 20%
- Design problems: 50%
- Classroom participation: 10%
- Exams: 20%

### **Comments on grading**

- *The grader will not search for your answers.*
- *Answer questions in a clear, concise manner.*
- *If graphs are required, make sure that you label all axes.*
- *If we can't find your answers easily, you don't get the credit!*

### **Required text**

- Marc T. Thompson, *Intuitive Analog Circuit Design*, Newnes, 2006. Errata sheet will be emailed out separately.
- Course Powerpoint presentations are available on MyWPI.
- Other industry application notes are available on the MyWPI course website.

### **Other recommended texts**

Floyd M. Gardner, *Phaselock Techniques*, 2d edition, John Wiley, 1979

Paul R. Gray and Robert G. Meyer, *Analysis and Design of Analog Integrated Circuits*, 2d edition, John Wiley, 1984.  
*Contains other information on method of open circuit time constants.*

Richard S. Muller and Theodore I. Kamins, *Device Electronics for Integrated Circuits*, 2d edition, John Wiley, 1986

S. M. Sze, *Physics of Semiconductor Devices*, John Wiley, 1981

D'Arcy W. Thompson, *On Growth and Form*, Cambridge University Press, 1961

### **Late policy**

Late work will not be accepted, unless there is a family emergency.

### **Collaboration and academic honesty<sup>1</sup>**

All the rules of WPI's Academic Honesty Policy will be in effect (<http://www.wpi.edu/Pubs/Policies/Judicial/sect5.html>). You **must** review them and be familiar with them. They describe procedures that will be taken if dishonesty is suspected. You may not copy from any source (person, book, old homework, web etc.). If you are not sure whether your or a classmate's behavior follows the Honesty Policies, be sure to ask. **The use of old homework sets, course "bibles", etc. is explicitly not allowed.**
